Website Health Check

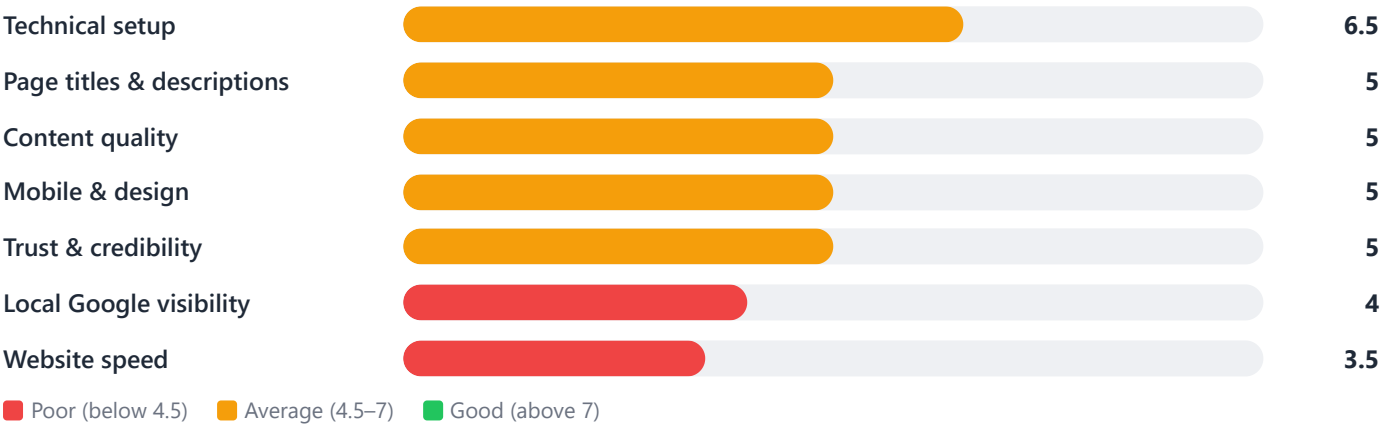

fgirenonv.com — Feel Good Insurance, Sparks NV · October 8, 2026

Average — the website has a decent base, but several problems are holding it back on Google and with visitors.

Score scale: **1** = very poor, **10** = the best of the best.
We found **6 serious problems** and **6 moderate problems**.

Score by area

✓ What is already working well

- The site is secure (padlock / HTTPS) and every web address version leads to the same place.
- Google can find all pages — the site map and crawler rules are set up correctly.
- The homepage has a clear title that mentions "Sparks, NV".
- There are pages for 15 cities and 9 services — a good foundation.

The main problems at a glance

1. Website is slow SERIOUS

The main picture takes about **6 seconds** to appear. Many visitors leave before then, and Google ranks slow sites lower.

2. City pages have the wrong titles SERIOUS

The title Google shows for each city page talks about a different topic than the page itself (see page 3).

3. A competitor's name is used SERIOUS

The Carson City page title contains **"Direct Auto"** — another insurance company's brand name.

4. Google doesn't "know" it's a local agency SERIOUS

The hidden business information Google reads (address, hours, phone, area served) is missing. This hurts map and "near me" results.

5. Phone visitors see no message SERIOUS

On a phone, the first screen is only a photo — no headline, no "Get a Quote" button, no phone number.

6. Risky "99.9% Claims Approved" claim SERIOUS

An agency usually doesn't decide claims and can't prove this number. It can damage trust and may cause compliance issues.

7. Visible typo on a city page MODERATE

The Fernley page reads: "*high-risk insurance services in **Statewide Nevada ,***" — a leftover from a template.

8. Wrong page descriptions MODERATE

The Contact page's Google description talks about "notary services". All city pages share the same copy-paste description.

9. Chat box pops up by itself MODERATE

The chat window opens automatically and covers the page content on first visit.

10. Text hard to read on the main photo MODERATE

On computers, the main headline and paragraph sit on top of people's faces in the photo.

11. Thin blog, no named experts MODERATE

Only 8 articles, none show who wrote them. Google values visible expert authors for insurance topics.

12. Odd or unrealistic wording MODERATE

"Domestic insurance provider", "we do massive research", and a "24/7" support promise sound unprofessional or hard to keep.

Problem in detail: City page titles don't match

This is the blue headline people see on Google. Each city page is a **general insurance page**, but its Google title says something else:

City page	What Google shows	What's wrong
Reno	"Life Insurance Agents Services in Reno, NV"	✗ **Only mentions life insurance**
Sparks (home city)	"Average Motorcycle Insurance in Sparks, NV"	✗ **Home city is about motorcycles only**
Carson City	"Direct Auto Car Insurance Services in Carson City"	✗ **Uses a competitor's brand**
Fernley	"DMV Registration Services in Fernley, NV"	✗ **Page isn't about DMV services**

Result: people searching "insurance agent in Reno" or "Sparks insurance" are less likely to see or click these pages.

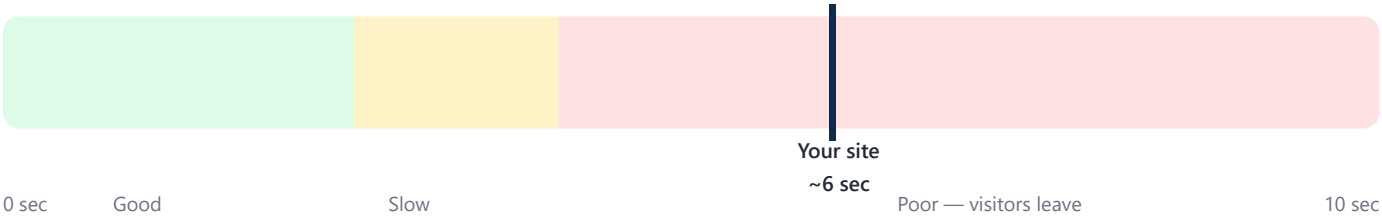

Problem in detail: Speed

~6 sec
until main picture shows (Google's target: under 2.5 sec)

2.5 MB
downloaded per visit (heavy for phones)

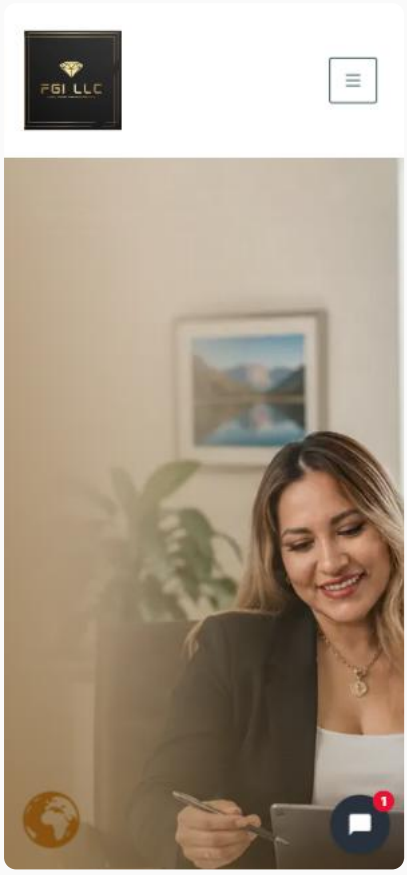

151
separate files loaded (54 of them are scripts)

up to 4 sec
server wait on some pages before anything starts

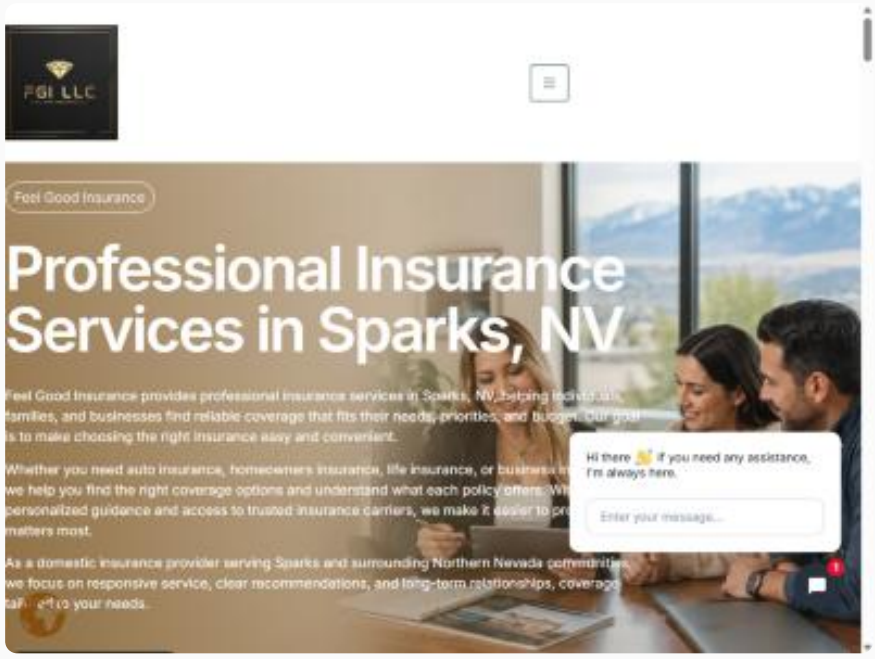

Measured in a desktop browser on Oct 8, 2026. Phones on mobile data are usually slower.

Problem in detail: What visitors actually see

On a phone: the entire first screen is a photo. No headline, no button, no phone number. The chat bubble covers the corner.

On a computer: the headline and paragraph run across people's faces, making it hard to read. The chat window pops open on its own and covers part of the text.

Other issues found

Issue	Why it matters (in plain words)
Number counters show "0+" until the page fully loads	Google and slow phones may only see "0 lives protected" and "0 years of experience".
Menu links point to old page addresses	Every click goes through an extra hop (e.g. /auto-insurance/ → /services/auto-insurance/), slowing things down and wasting Google's attention.
Menu flashes unstyled while loading	For a split second the page shows a broken-looking list before the design appears.
Spanish version is auto-translated only	Google doesn't index it, so Spanish-speaking searchers in Reno/Sparks won't find the site.
Social sharing image missing on homepage	When someone shares the link on Facebook/WhatsApp, no preview picture appears.
Blog articles show no author	Visitors and Google can't see that a licensed agent wrote the advice.

Not checked (requires owner access): Google Business Profile, Google Search Console data, backlinks and online reviews.
